Lyric Policy Management Module

Providing an enterprise framework for policies and edits.

Lyric's Policy Management Module is a single-rule framework that can be layered into many policies, providing an enterprise foundation for streamlining creation, deployment, and maintenance of a wide variety of policies and edits.

With the Policy Management Module, you can address claim edits as early as possible in the adjudication cycle and quickly respond to current and future policy management needs.

You'll be able to rapidly add advanced rules to help ensure accurate payment the first time. The Module delivers:

- a powerful policy development platform for policies and edits

- Policy-level firing order for executing policy where needed

- Improved content management that delivers enhanced capability to simplify content creation and maintenance, speeding development time and reducing costs

- Additional enhancements, such as flexible cross provider analysis (same provider group, cross provider, and more) and other configurablility improvements to streamine implementation with increasing value
